SUMMARY

Full-stack developer and Computer Science student. I created and maintain Cliniclis, a multi-tenant SaaS for medical and aesthetic clinics, running in production with real clinics: I handle the API, database, frontend, deployment and direct support. I also build websites and landing pages for freelance clients. Open to freelance projects and developer positions.

EXPERIENCE

Founder & Full-Stack Developer, Cliniclis — Dec 2025 to Present

Own product, sold by subscription · PHP 8, MariaDB/MySQL, Angular, TypeScript, Docker

- Built a framework-free REST API in PHP (about 70 endpoints, 31k lines of backend) and an Angular frontend, alone
- Multi-tenant: a single installation serves every clinic, with data isolated per clinic through the session token
- Subscription plans that enable or disable modules both in the API and in the Angular route guards
- Electronic contract signing on mobile: single-use links, CPF check, SHA-256 hash and PDF with QR-code verification
- Security: bcrypt with transparent migration at login, rate limiting and CORS by exact origin list
- Idempotent database migrations, local environment in Docker and CI with Vitest tests and technical-debt checks

Freelance Web Developer — 2025 to Present

- **Conde Estética Avançada** (Angular): institutional website and patient acquisition for an aesthetic clinic in Brasília, with a treatment catalog, local SEO and a mobile-first layout. Maintained after delivery, including a full redesign and a custom domain
- **Mirelle Sine** (vanilla JavaScript): bilingual portfolio for an iOS engineer, with a custom i18n layer (267 keys) switching EN/PT without reloading, accessibility labels and lazy-loaded images

Graphic Designer, Planeta Pub — Mar 2018 to Dec 2018

Visual communication and design of graphic materials; the background behind the detail-oriented interfaces I build today.

PERSONAL PROJECTS

- **PetWalker** (React, TypeScript, Vite, Tailwind, Firebase): store with authentication, protected routes and a cart that survives navigation, using separate contexts for session and cart
- **Portfolio** (vanilla JavaScript): framework-free SPA with a custom router, component lifecycle and animations, no runtime dependencies

EDUCATION

B.Sc. in Computer Science, Universidade Católica de Brasília — 2023 to 2027 (expected)

FullStack-PRO, Sujeito Programador (190 hours) — Completed Dec 2025

Frontend, backend, mobile and DevOps: React, TypeScript, Next.js, Node.js, NestJS, React Native.

SKILLS

Daily work	PHP, MySQL, Angular, TypeScript, JavaScript, HTML, CSS, Git
Confident with	React, Next.js, Node.js, Tailwind, Bootstrap, Docker, GitHub Actions, Firebase
Learning	NestJS, Java

LANGUAGES

Portuguese (native) · English (upper-intermediate, B2)
